Chapter 1

Introduction

1.1 Problem Statement

Define the real-world problem clearly. State why it is important, who faces it, and how your project provides a solution. Mention limitations if any.

1.2 Abstract

A brief summary (150–250 words) covering:

- The problem
- Proposed solution
- Tools/technologies used
- Expected outcome

Chapter 2

Software Project Plan

Time Schedule for Various Phases

Plan out the development stages. Example:

- Week 1–2: Requirement Gathering
- Week 3–4: System Analysis and Design
- Week 5–7: Coding
- Week 8: Testing
- Week 9–10: Implementation & Report Preparation

Chapter 3

Software Requirements Specification (SRS)

3.1 Functional Requirements

List the core system features. Example:

- Add/update/delete records
- Search functionality
- Generate reports

3.2 Non-Functional Requirements

Define quality expectations:

- Performance (fast response)
- Security (authentication, data protection)
- Usability (user-friendly interface)
- Scalability (support for more users in future)

Chapter 4

System Analysis

Data Flow / Use Case Diagram

usecase.png

Include diagrams showing system flow. Example:

Chapter 5

Design

5.1 Front End Design

Describe the interface (login, dashboard, forms). Add screenshots if available.

5.2 Back End Design

Show database schema (ER diagrams, table design).

5.3 Interface Design

Explain how UI communicates with the database (API calls, SQL queries, validation).

Chapter 6

Coding

6.1 Sample Coding

Provide key snippets of your project:

Listing 6.1: Sample Login Function

```
def login (username , password ) :  
    if username=="admin" and password=="1234" :  
        return "Login - Successful"  
    else :  
        return "Invalid - Credentials"
```

Chapter 7

Testing

7.1 Unit Testing

Test individual modules separately.

7.2 Integration Testing

Ensure combined modules work correctly.

7.3 Validation Testing

Check against functional requirements.

7.4 Debugging

Mention errors encountered and solutions applied.

Chapter 8

Implementation

8.1 Problems Faced

List challenges faced (technical, time-related, debugging issues).

8.2 Lessons Learnt

Mention technical knowledge and teamwork skills gained.

Chapter 9

Future Plans

Suggest enhancements (mobile app, cloud hosting, AI features, additional modules).

Guidelines for Project Presentation & Submission

1. Prepare your presentation content using this Table of Contents.
2. Presentation duration: 10 minutes.
3. Record using Zoom, Teams, Google Meet, or other tools.
4. Ensure both slides (screen) and audio (voice) are recorded.
5. Use a good microphone for clarity.
6. Submit the recorded video.
